It's weird it's minimalist it's indie and it's free so I love it. Food for thought.. It's good. I'm too lazy to write a good review, but just imagine I wrote a lot about it, and it's great, and how amazingly under-rated it is, but you know support the developers.. The most hipster thing that ever hipstered.. These "games" make just about as much sense as the art film you can watch in GTA V (the critically-acclaimed "Capolavoro", directed by Emanuelle Pasorelli and produced by European Art Haus :) I'm giving this a half-sarcastic thumbs-up, just because it was free, and somebody actually put a lot of work into developing this software. But seriously, don't waste your time with this nonsense. Unless you really, really, really have nothing better to do.. First, second and third are the best, the other 2 lack content D: 7/10
